SLENDER SIBERIAN CRABAPPLE
Our most slender variety

TREE OR SHRUB FORM

Descriptions of Flowering Crabapples

CRAB, ALDENHAM

Showy, semi-double, purple flowers. Often blooms twice in a season. Purple foliage. 12 to 15 ft.

CRAB, ARNOLD

Large, rose-pink buds opening pink and turning white. Attractive yellow fruit. Popular. 15 to 20 ft.

CRAB, CARMINE. Flowers carmine changing to carmine and white, followed by small red fruit. Dark green foliage. 12 to 15 ft.

CRAB, COLUMN CHERRY

Large, single, rose-pink flowers opening white. Yellowish red fruit. Interesting especially for its upright habit of growth. 20 to 25 ft.

CRAB, DOLGO

Large single white flowers. Brilliant crimson fruit early in August. One of the best in fruit. Excellent for jelly. 20 to 25 ft.

CRAB, DOUBLE CHINESE WHITE

Large double white blooms borne with reckless profusion. It is a beauty. 15 to 20 ft.

CRAB, HOPA

Large, early, showy, single, light purplish red flowers, followed by orange-red fruit. Good for jelly. Tree an upright grower. 20 to 25 ft.

CRAB, JAY DARLING

Perhaps the showiest of all in flower. Tree full of purplish red flowers. Fruit brilliant. Beautiful bronze foliage. Excellent for jelly and pickling. Probably our favorite of all Crabs. 15 to 20 ft.

CRAB, KATHERINE

Unusually large, double, pinkish white flowers; large red fruit. Promises to become a popular variety. 20 to 25 ft.

CRAB, KINGSMERE

Very large purplish red foliage. Large red fruit. Outstanding purplish foliage with a bluish cast. A Miss Preston Rosybloom worth watching. Probably best as a specimen. 15 to 20 ft.

CRAB, PURPLE

Large, single purplish red flowers. Bronze foliage. Purple fruit. Early. One of the best for the average garden. 15 to 20 ft.

CRAB, PRINCE GEORGES

Very large, double, pink flowers. The leaves are narrower than those of Bechtel's. May be a hybrid of this and *Angustifolia*. Flowers have up to 60 petals. The most strongly double flowering Crabapple we know. A new hybrid with a great future. 15 to 20 ft.

CRAB, REDBUD

Single pink buds, opening white. Small bright red fruit produced in large quantities. Especially attractive in fruit, which hangs on very late. Birds like it. 15 to 20 ft.

CRAB, RED SILVER

Single reddish purple flowers, followed by dark maroon-purple fruit. The silvered appearance of the dark purplish foliage is very attractive and gives it the name. 15 to 20 ft.

CRAB, SLENDER SIBERIAN

Large, single white flowers. Small orange fruit. Our most slender Crabapple. 20 to 25 ft.

CRAB, TANNER

Showy white blooms. 12 to 25 ft.

CRAB, WABISKAW

Large, single to semi-double, purplish red flowers. Large and not especially attractive red fruit. Upright. Very beautiful in fall foliage. Another of the promising Preston Rosybloom. From Canada. 20 to 25 ft.
